
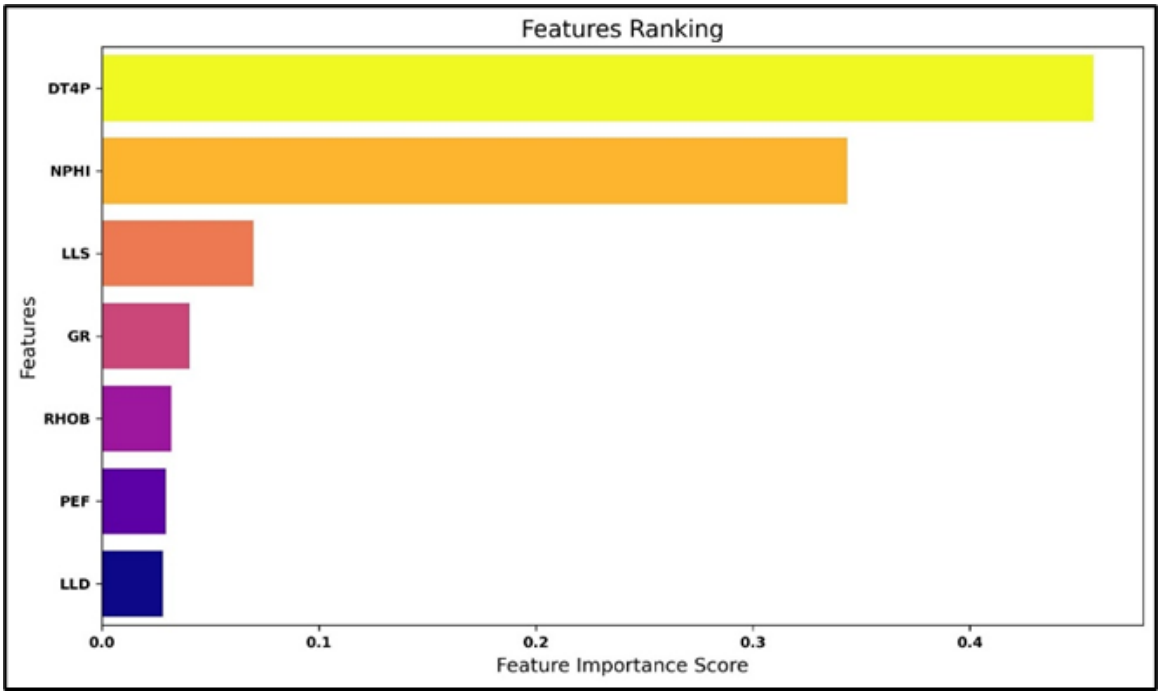
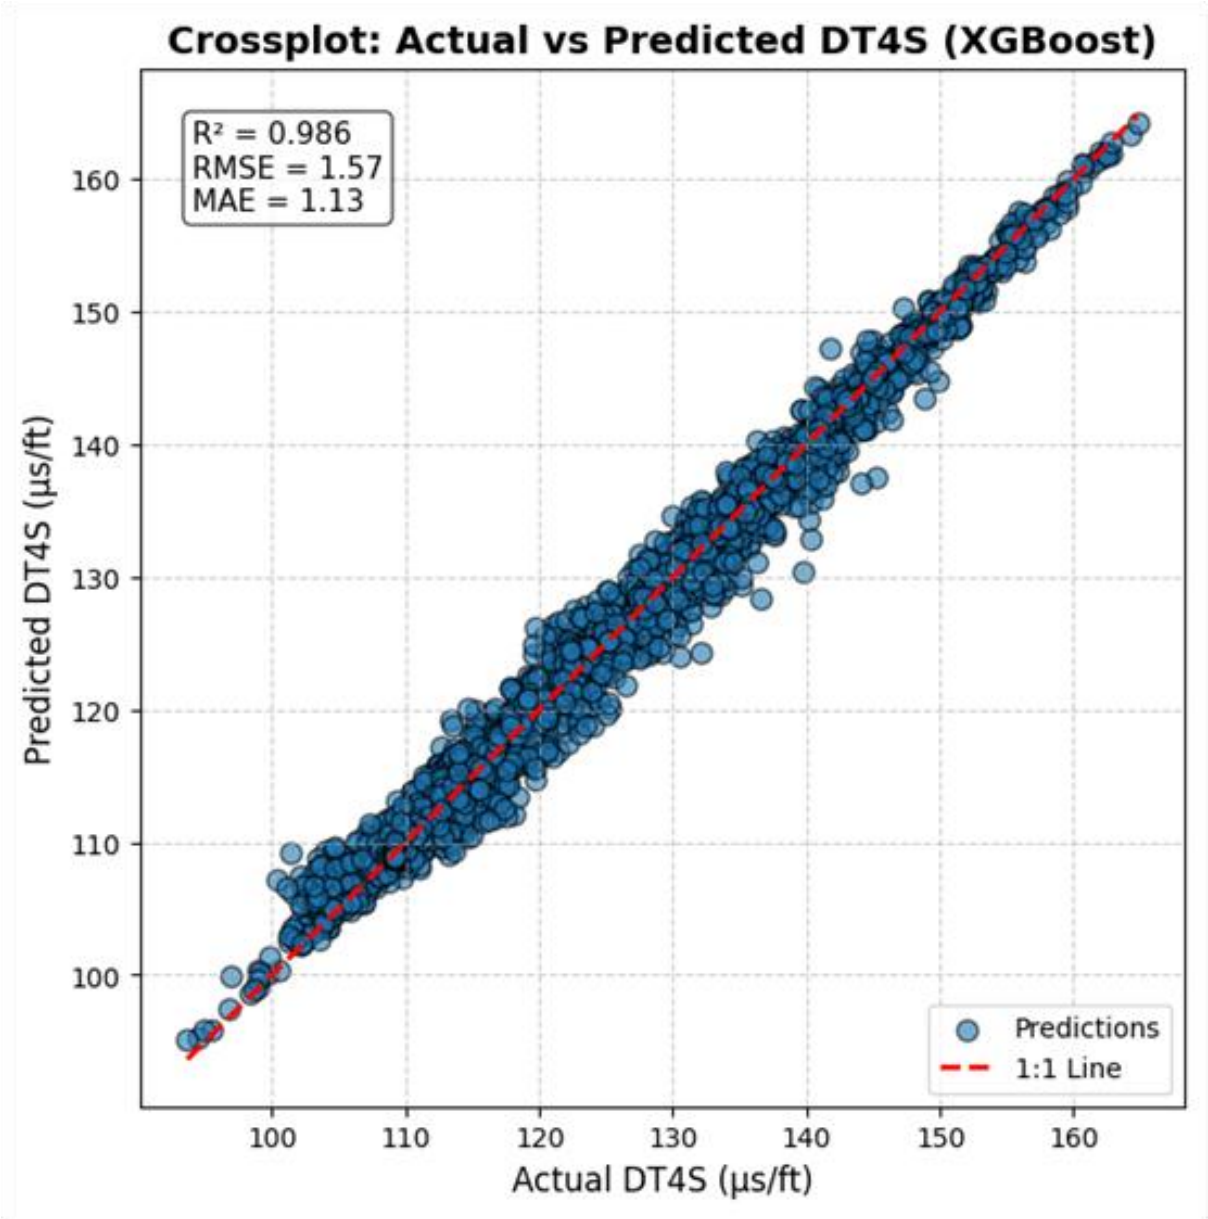
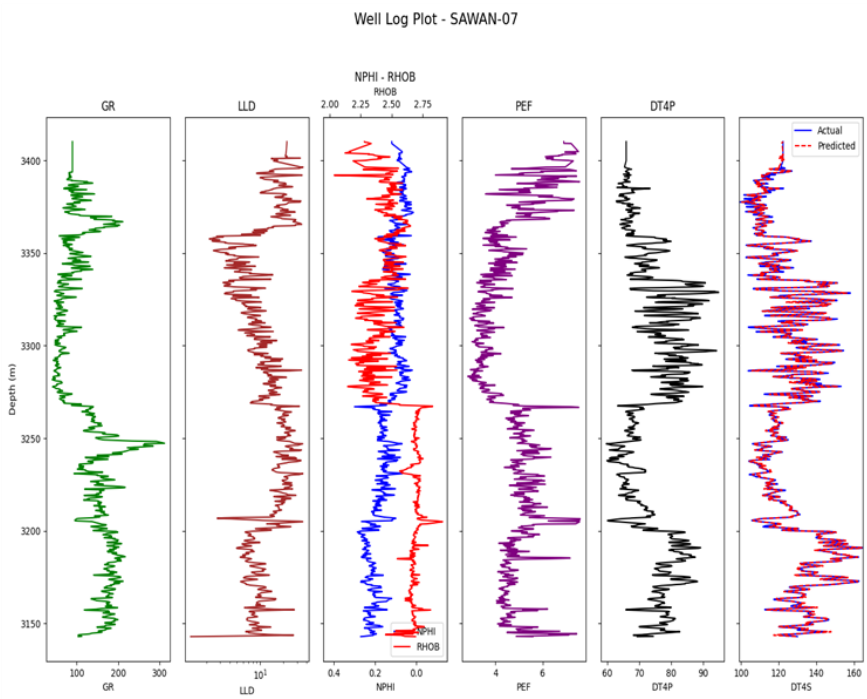
Distribution of the data analysis for Sawan-07. The histograms show the frequency and range of various petrophysical logs (GR, RHOB, NPHI, DT, PEF, and resistivity LLD), demonstrate the predominant rock properties and fluid types encountered in the logged interval.



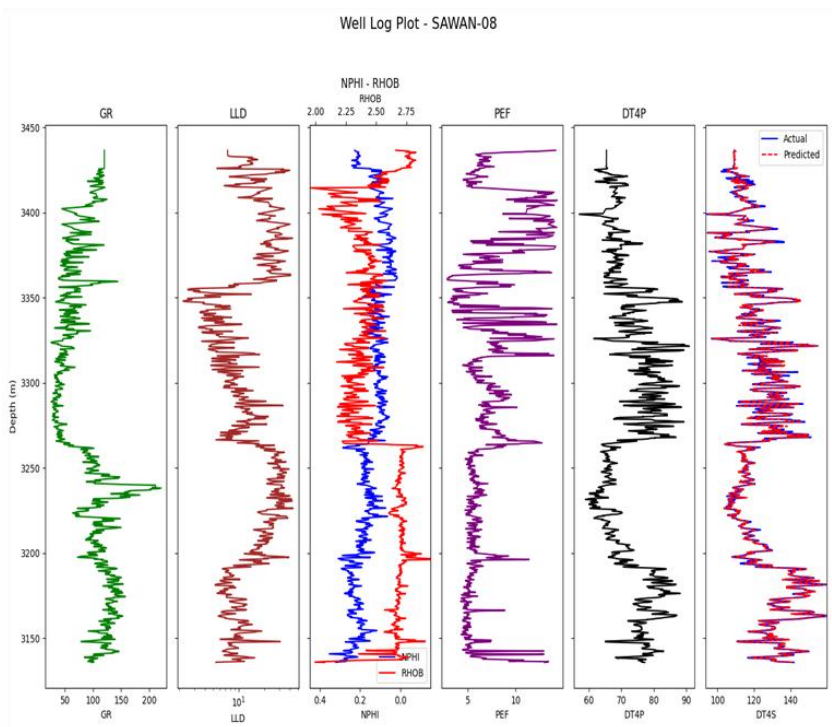
Feature importance showing the relative influence of input logs in predicting DT4S.



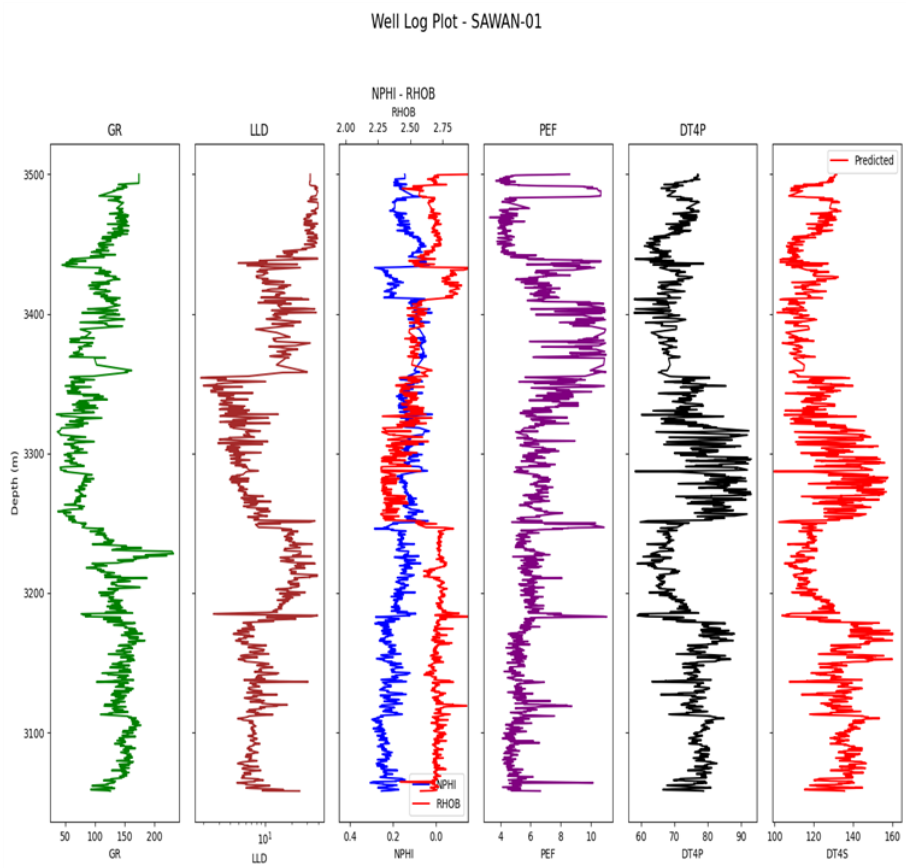
shows a strong correlation between predicted and measured DT4S values with an R^2 value of 0.94.



The trend of well Sawan-07 log curves with the predicted DT4S, as well as the other logs employed in the prediction, is illustrated.



The trend of well Sawan-08 log curves with the predicted DT4S, as well as the other logs employed in the prediction, is illustrated.



The trend of well Sawan-01 log curves with the predicted DT4S, as well as the other logs employed in the prediction, is illustrated
